

Medical Emergencies, Environmental Emergencies, and Emergency Child Birth

First Aid/CPR/AED Refresher Module 7

DETENTION
TRAINING UNIT

The image features the word "JEOPARDY!" in a large, metallic, three-dimensional font. The letters are silver with a brushed metal texture and are set against a vibrant, futuristic background. The background consists of a blue-to-purple gradient with a grid of glowing blue lines that create a sense of depth and perspective. Several bright, multi-pointed starburst effects are scattered across the upper portion of the image. A horizontal band of orange and yellow light is visible behind the text, suggesting a horizon or a source of energy. The overall aesthetic is high-tech and dynamic.

JEOPARDY!

Breathing Emergencies/ Allergic Reactions	Alcohol & Drug Emergencies	Fractures/ Sprains/ Strains/ Splinting & Facial Trauma	Environmental Emergencies	Emergency Childbirth

**What respiratory
emergency is treated by
taking a puff from a
prescribed albuterol inhaler
or given a “breathing
treatment”?**

Cigarette smoking, second-hand smoking, air pollutants or chemical fumes can cause what respiratory diagnosis?

**Inflammation of the
bronchial tubes due to a
bacterial infection is known
as what?**

Hives/Rash, tightness in the chest/throat, and difficulty breathing are signs of what kind of emergency?

In order to resume normal breathing during an allergic reaction, what is the name of the medication that relaxes muscles and blocks the release of histamines?

**What are the common
symptoms of someone
withdrawing from alcohol?**

If someone has a low respiratory rate, low heart rate, pinpoint pupils, blueish lips and a decreased level of consciousness, what are they overdosing from?

What is the prescribed treatment for an opioid overdose AND how often should you readminister the treatment to them?

**What will the body
metabolize faster:
naloxone or opioid based
medication/drugs?**

True or false:
If left untreated, alcohol
withdrawals can become
deadly

Name the two kinds of fractures in these examples

True or False:
You should realign the limb
prior to splinting a
sprain/strain/dislocation/or
fracture

True or False:
After splinting, there
should be no pulse
detectable in the injured
extremity

Fill in the blanks:

A SPRAIN is the stretching or tearing of

A STRAIN is the stretching or tearing of

**This tooth needs to be reattached
within how many minutes?**

**What are the steps to take
when responding to
someone who is drowning?**

**Rapid and/or irregular pulse,
shallow breathing, confusion
and red, hot DRY skin presents
as what life-threatening heat
emergency?**

**Slow shallow breathing, dilated pupils,
irregular slow pulse rate, decreased
level of consciousness, gray-blue skin
color and a LACK of shivering presents
as what life-threatening cold
emergency?**

**The superficial freezing of
the skin's outer layer is
called what?**

What are these examples of?

True or False?

Deputies can transport a person who is having contractions and health staff has determined they do not have a fully dilated cervix

**How many stages of labor
are there, and which stage
is it safe for deputies to
transport in?**

Name the 2 obstetrical emergencies where the baby is being delivered with either arm coming out first or the baby is coming out backwards

True or False?

Newborn babies do not lose body heat rapidly, so take your time once they have been delivered, do not dry them off and cover their head.

Once delivery has been determined to be imminent, why is it important to apply gentle pressure to the baby's head during delivery?
